

Heart rate on the move!

Contents in your smartphones now includes real-time heart rate.

Now you can listen to your favorite **playlist**, watch your **GPS track**, connect to **social networks**, post on **Facebook** and **monitor your heart rate** all at the same time on your **smartphone!**

The **60beat receiver** receives the signal from your **MINIcardio** (or from any standard chest belt) and sends it to your **iPhone**. **Simply plug the receiver** into your iPhone, start compatible **Apps** (choose which one) and your **heart rate monitor data** now shows up on your iPhone.

Wear your Smartphone, mount it on your bike or wherever you like it, and you can still listen to music while **monitoring your heart rate**: just plug your headphones directly into the **60beat Rx receiver**.

Train yourself the better you can: your **heart rate**, your **GPS track** and your **playlist all together in just one device**, for indoor and outdoor training.

Your heart beats louder and louder with Hosand!
