```

The software according to coach De Paoli

Hosand Castle is the **software** that **Hosand Technologies** created in collaboration with **Mister De Paoli** and is the software that Hosand Technologies created in collaboration with Mister De Paoli and Mister Cristi.

The mission of **Hosand Castle** is to **simplify the data collection** on the field for all trainers aiming to use the **working methodology developed by Mister De Paoli**.

Finally, there's a **software** like **Hosand Castle** to **fill-in all of the forms** created by **Mister De Paoli**, thus allowing a user to take advantage of a **database with records** of **all** training sessions that took place during a whole season. Applications make it possible to **search for data**, later in time, to analyze the workload and to **repeat the very same job** in a new training session.

Finally, it is no more the user that have to understand the data organization proposed by a software but it is **the software that adapts to user's needs.**

Exclusevely for your samurai!

Hosand CASTLE system contains:

- Castle (data storage module featured by Mr. De Paoli)
- DataClips (software for data collection)

- LogBook (software for statistical analysis)

Minimal system requirements:

- Windows XP OS Service Pack 3 or earlier
- PC with Pentium® III 800 MHz or better
- RAM 512 MB
