60beat with chest belt

Turn your iPhone into a heart rate monitor!

Now you can use **60beat** and APPStore to shape up your heart rate monitor based on user needs and update it every time you want!

Joining together 60beat and iPhone potential, youâ€™ll be no longer bound to purchase many different hardware devices: just download a new App to change features of your heart rate monitor (with very low costs).

Use:

60 beat is easy-to-use: just plug it into your iPhone earphone jack, turn it ON with the activation button, wear the cardio chest strap which is part of the kit and download a compatible App (there are many of them already available)

60beat does not limit your iPhone functionality. You can still plug-in your earphone to listen to music while displaying your heart rate, at the same time.

60beat features:

- Earphone plug-in with standard interface of 3,5 mm, iPhone compatible.
- Earphone jack to listen to music while showing heart rate.
- Compatibility with all chest straps with standard transmission (5 Khz of frequency), like some Polar.

- Power supply via CR 2032 battery, with an average of 3 years lasting (with standard use).
- Plastic case.
- Cardio chest strap with replaceable battery.
- Maximum range of reception of 0,8 meters.

Today compatible App :

- LogYourRun series
- Runtastic series
- ARAwella series
- Hanwell series
- EZ series (per Ipad)
