The new **Â Hosand** software package for **fitness coach at forefront**.

A **quick and efficient** way of data collection.

Arising from a cooperation with Ivan Carminati, **Â Training Logger** is the brand new software of **Hosand**. It lets you control all training data **easily and at a glance** and grants you an accurate **statistical assessment**.

Now itâ€™s time for an easy tool to classify all that we ask players to do.

From now on, no more spreadsheets and huge quantities of number to digest. It is possible with just **one tool** with **self-proposal** of both storage and statistical analysis.

Main characteristics of Training Logger module:

- Speed of data entry for a truly efficient work on the field.
- A single tool, flexible and customizable: the right place to collect the whole history of all trainings.
- Fast analysis of collected data to be used to assess the quality of your work, even daily, if you want!
- Analysis for a single player, for groups of players, for training sessions, completely customizable!

Just one tool to collect and assess essential data for professionals, at a glance.

GET READY FOR SUCCESS!

TRAINING LOGGER STARTER PACK contains:

- Training Logger (data storage module featured by Ivan Carminati)
- DataClips (software for data collection)
- LogBook (software for statistical analysis)

Minimal system requirements:

- Windows XP OS Service Pack 3 or earlier
